

Yodock® APC Low-profile Airport Barricade

"Fully complies with FAA specifications"

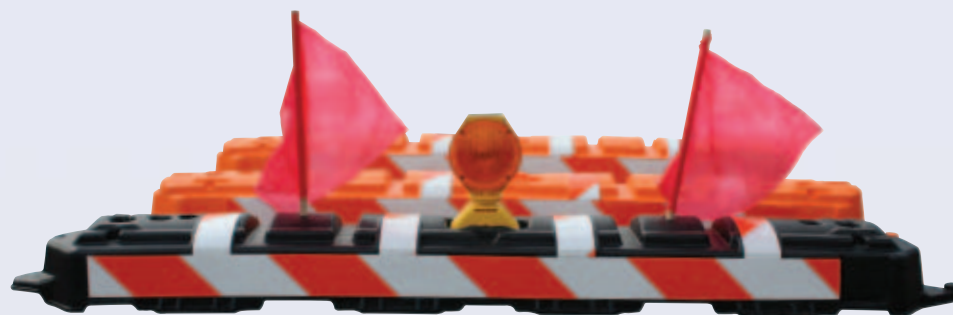

Features and Benefits:

- **Complies with Federal Aviation Administration's specifications and standards including Advisory Circular 150/5370-2E**
- **Improves visibility of the low profile design which does not interfere with air and taxiing traffic**
- **Enables multiple configurations including 90 degree articulation**
- **Features interlocking connections for continuous line of demarcation**
- **Boasts durable construction with twin sheet deformable, frangible, UV resistant, high density polyethylene**

Why Yodock® is the Preferred Choice

- Quality** – Yodock® offers the best water ballasted barricade products in the industry.
- Visibility** – The ONLY product to offer Top and Side mount reflective tape for increased visibility.
- Stability** – The ONLY product designed with bottom flange mounts to permanently lag or fasten to surface or roadway.
- Stanchion Mount** – The ONLY product customized with post boot to accommodate fencing, delineator or sign posts.
- Storage** – Easily stackable for convenient storage and deployment.

Yodock® APC – Airport Curb

Changes in regulation within the Federal Airport Administration, Homeland Security, and the Department of Transportation have demanded higher standards of the safety and channelization of air traffic and construction at all airports.

Over 25 years ago we pioneered the water filled barricade industry. The Yodock® APC can meet the need for low profile, frangible, highly visible channelizing products that clearly distinguish a work zone from a taxi way in an airport.

The Yodock® APC fully complies with the FAA Advisory Circular 150/5370-2E specifications and performance standards for use in all airport movement areas such as closed runways or during construction.
